

October 27, 2023

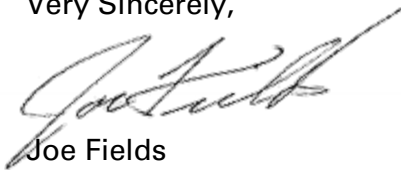

Dear Customer,

TenCate turf is not manufactured with PFAS. It is not in our raw ingredients or materials, and it is intentionally not used in machinery extrusion agents. Users, buyers and installers of our turf can rest assured that there will be no dangerous PFAS exposure from our turf.

Where people *will* be exposed to PFAS, however, is surprising: Their dental floss. Makeup. Kids' toys. Their daily prescription. Freshwater fish. Cookware. Raingear.

If you have more questions about TenCate turf and PFAS, please email [info@sgwcorp.com](mailto:info@sgwcorp.com).

Very Sincerely,

Joe Fields  
CEO- TenCate Americas
